**Orders are solid for New Optical Thin Film Coater for Optical Telecommunication**

Optorun Co., Ltd. (Optorun) has started receiving solid orders for its new optical thin film coater for optical telecommunication.

Immediately after its foundation in 1999, Optorun succeeded in developing and marketing state-of-the-art vacuum deposit system that enabled optical filter coating for multiplexed optical telecommunication. Now with the dawn of the 5G era, it has entirely renewed the design and performance and developed new system that enables mass production of high performance optical thin films required for 5G. The new system realizes production of filters with much higher performance than conventional type for DWDM in optical telecommunication. It has already received orders from multiple customers and will stay focused on its marketing activities. This system is just one of its pipeline of new products which are either recently completed or under development. We will stay committed to completing development of other new products and expanding sales in the market.
